

# MARK

VARIABLE-SPEED COMPRESSORS  
IVR from 30 to 160 kW

TECHNOLOGY YOU CAN TRUST

# IVR for Environment

Our extensive experience of compressed air has taught us that, regardless of a compressor's size:

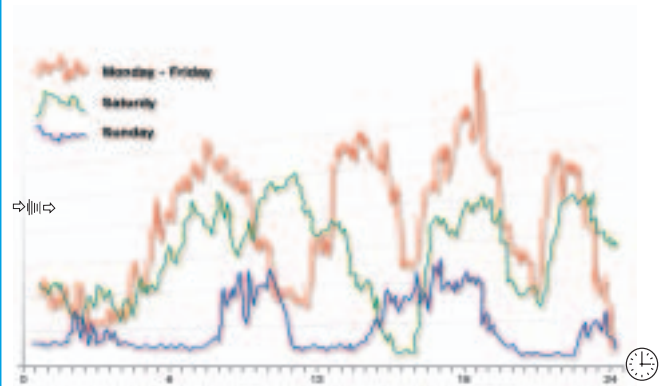

- the amount of compressed air needed varies according to consumption peaks,
- the greater the variation in compressed air consumption, the more energy is consumed per liter of air produced,
- most installations require two or three compressors of different sizes.

Variations in the amount of compressed air needed cause constant loading and emptying of the compressors or choked intake.

If a compressor operates empty, energy is wasted while no work is performed.

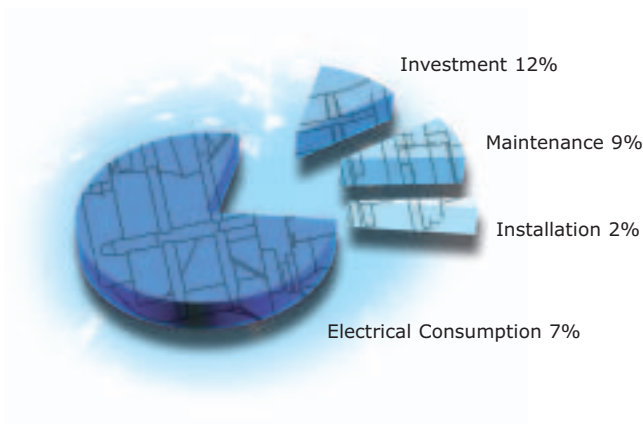

If a compressor operates with choked intake, it consumes more energy than would be required to produce the same amount of compressed air.

The amount of compressed air needed during a given day or week varies depending on production.

These variations may be more or less intense. The more intense they are, the more energy is consumed when the compressor operates empty.

Only producing the air needed for the production cycle is an intelligent way to cut consumption and power costs.

It is well-known that in 3-5 years of operation, over three quarters of the overall cost of a compressor is ascribable to electricity consumption.

REDUCING electricity consumption means:

- Lower power costs = **SAVINGS**
- Lower power consumption = **ENVIRONMENTAL FRIENDLINESS**

**Energy saving is the best possible investment for improved future performance.**

# IVR high Technology

from 0,300 to 13,338 m<sup>3</sup>/min. for every requirement

Variable-speed compressors with Inverters from MARK operate optimally under any load conditions and ensure maximum capacity with minimum consumption.

All components are reliable, efficient and time-proven, and are the standard components used in traditional machines.

The inverter is made by the world's leading brand, and is built into the machine.

**Compressor** with asymmetric screws. High efficiency, high yield and low noise level.

Main **electric motor** enclosed, air-cooled with external ventilation and Class F insulation.

Triple-action **air/oil separator** guarantees compressed air delivery with lower residual-oil content.

Compact, highly efficient air/air and air/oil **coolers** maintain optimum oil temperature and keep delivery air cool.

**Control panel** with state-of-the-art control system, microprocessor diagnostics and alphanumeric display for safe, efficient machine management.

All data displayed in standardized symbols

Built-in **frequency converter** for compressor speed variation and ramped motor startup, including standard RFI filters.

**Sound-proofing fairing** in wide, painted steel panels, removable for easy access to all internal components.

Sturdy steel **base** set-up for easy handling.

# IVR Range 30 - 160 kW

30 - 37 - 45 - 55 kW

55 - 75 - 90 kW

160 kW

## Easy maintenance

Particular care has been taken to simplify all maintenance operations:

- wide, easily removable side doors or panels ensure easy access to all internal components
- all components can be removed without special equipment
- scheduled signaling of all maintenance required.

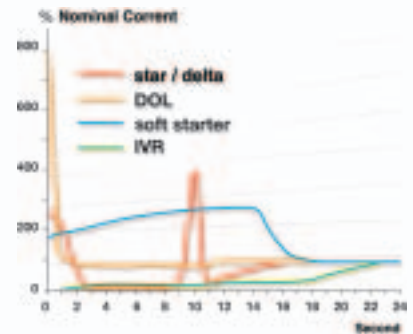

## Easy to use

The compressor is controlled by a safe, state-of-the-art monitoring system proven through years of use in traditional machines:

- automatically manages the multiple running phases, such as startup, adjustment, compressor control and shutoff
- stops the compressor in the event of breakdowns
- All messages are digital, displayed simply and clearly, and directly readable without special codes.

## Soft startup

Traditional startup results in high current peaks.

Startup with the inverter:

- does NOT cause current peaks
- does NOT result in overheating to an extent that limits the number of startups
- does NOT cause mechanical stress to coupling elements
- EXTENDS the life of bearings, belts and transmission joints.

## Integrated INVERTER

A highly efficient frequency converter with low harmonic distortion ensures excellent output for all compressor operations.

A standard product compatible with our compressors.

Conforms to current standards of electromagnetic compatibility.

Built into the machine in a well-aired housing.

# IVR Savings...

...with the variable-speed compressor from MARK

## Principle

Variations in the amount of compressed air required cause corresponding variations in line pressure.

Pressure variation is detected by the compressor delivery pressure sensor, which processes the signal and transmits it to the control system.

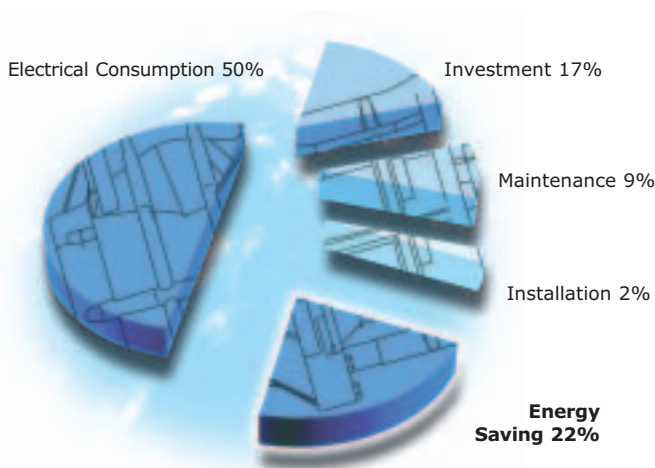

The machine varies motor speed and keeps line pressure constant, adjusting automatically according to consumption. This means it only supplies the amount of compressed air required by the system.

The motor speed is regulated by varying the electric motor feed frequency.

Every re-start of the electric motor using the INVERTER is ramped, with limited current. This means an unlimited number of startups can be performed, unlike traditional compressors with direct or ASD startup.

## Result

The IVR screw compressor, coupled to a system that electronically adjusts the motor's rotation speed, ONLY CONSUMES the energy needed to produce the compressed air required by the system. This saves over 20% in approximately 20,000 hours of operation compared to traditional equal power.

## Advantages

- **LOWER RUNNING COST**
  - Only uses energy for air production.
  - No energy wasted on partial loading
- **CONSTANT PRESSURE**
  - Lower energy consumption.
  - Higher process stability.
- **LOWER MAXIMUM PRESSURE**
  - Lower energy consumption for lowest maximum pressure.
  - Reduced compressed air leaks.
- **CONSTANT POWER FACTOR (Cos φ)**
  - High value, even with reduced loads.
  - No need for rephasing.
  - No penalties imposed by power suppliers.
- **RAMPED MOTOR-STARTUP**
  - No current peaks.
  - Lower energy consumption.
  - Less stress on coupling elements.
  - Improved mechanical reliability.
  - Unlimited startups.
  - No penalties imposed by power suppliers.
- **STANDARD COMPONENTS**
  - Reliable, standard motors and inverter.
  - Customer service available everywhere.
- **EASY MAINTENANCE**
  - Easy component access.
  - Operation parameter monitoring.
- **LONGER MAINTENANCE INTERVALS**
- **ELECTROMAGNETIC COMPATIBILITY**
- **SILENT RUNNING**
- **MARK GUARANTEE**
- **PROFITABLE IN THE LONG RUN**

In response to these needs, MARK offers its own range of compressors with **INVERTER** and its own technical experts to analyze your requirements.
